

**In the Specification:**

Please amend the paragraph bridging pages 34-35, as follows:

Fig. 17 is a sectional view of a modification of the gas ejector shown in Fig. 16. A gas ejector 91 as a modification of that shown in Fig. 16 includes a supporting member 92 configured to support the rod 85. The supporting member 92 is composed of a bellows member, for example. With the supporting member 92, the rod ~~75~~ 85 is prevented from lateral deflection relative to the vibration direction of the vibrator 45, thereby achieving stable vibration of the vibrator 45. Also, when the supporting member 92 is disposed, for example, so as to cover the bore section 72e and seal the housing 72, air in the housing 72 is prevented from leaking from the bore section 72e when the vibrator 45 is vibrated.
